

# INSPECTION MANAGER™

Inspection Manager™ is a management tool designed to schedule, track and document maintenance activities for a wide variety of facility operations. Inspection Manager uses software and hand-held computers to increase the productivity and accuracy of physical security inspection and maintenance personnel by eliminating hand-written log sheets and manual data entry. Inspection Manager provides documented time and date stamped proof that all inspections within a property were completed. It is an Enterprise Solution, but can also be utilized as a stand-alone or network version.

## **HOW WILL YOUR FACILITY BENEFIT FROM INSPECTION MANAGER?**

### **Physical Security Inspections & Tours**

Inspection Manager assures that all sites have been visited and presents immediate proof with a date and time stamp. The system documents incidents or safety hazards that may be encountered during a tour of the property.

### **Fire & Safety Equipment Inspections**

Inspection Manager quickly tracks and documents inspections and maintenance on all types of fire and life safety equipment, including fire extinguishers, hoses, pumps, sprinklers, valves, and more.

### **Janitorial and Housekeeping Inspections**

Inspection Manager tracks and documents activities performed by personnel responsible for ensuring safety, sanitary and security conditions in bathrooms, lobbies, lunchrooms, and other areas that require clean, operational conditions. The system also allows for documentation of discrepancies encountered such as plumbing leaks, broken glass, burnt out lights, spills and more.

### **Property Condition Inspections**

Inspection Manager tracks inspection and maintenance activities on all types

of property including light poles, banners, entry doors, and parking lots. Even unexpected situations such as assistance to a motorist are easily documented using Inspection Manager's WildCard feature.

### **Property Equipment/HVAC Equipment Inspections**

Inspection Manager will track and document the inspection of property equipment such as elevators, escalators, vending machines, and telephones. Inspection Manager also maintains a comprehensive database that tracks the required maintenance intervals and establishes test parameters for inspection and maintenance of HVAC equipment. This information is quickly transformed into reports for proving IAQ and OSHA compliance.

### **Why use Inspection Manager?**

- ▶ Inspection Manager streamlines your inspection process. Inspection criteria is entered into the system and then parameters are transferred to the hand-held computer. Inspection and maintenance personnel simply scan bar codes on equipment located throughout your facility. Each time a bar code is scanned, the system records the time and date of the inspection. By using the keypad on the hand-held computer, the system can also document any discrepancies encountered.
- ▶ Inspection Manager eliminates paperwork and manual data entry by electronically gathering and monitoring data. The system helps you speed up the data collection process and reduces administrative time.
- ▶ Inspection Manager provides a variety of reports showing the location of your inspectors, what their observations were, and the actions taken. Available reports include: history reports, status reports, incident reports, and equipment reports. User-defined reports are also available.
- ▶ The Inspection Manager system provides tamper-proof records that assist in proving compliance. Inspection Manager's comprehensive reports ensure compliance with OSHA, NFPA, JCAHO, your own internal regulations and other regulatory agencies.

## DEVICES:

### MC 9090-K

This rugged device is built to withstand all types of environments and endures drops up to 6 feet. The MC 9090-K is sealed to IP64 standards, protecting it against windblown rain and dust. It features a large backlit LED display that allows easy screen viewing in all types of lighting conditions. It also offers the familiarity of Windows™

**Size:** 9.2" H x 3.6" W x 1.7" L **Weight:** 22 - 25 oz.

### Symbol MC70

- Intel XScale™ 624 MHz Processor
- 3.5" QVGA 65K Color Display
- Windows Mobile 5 Premium/Phone Edition
- 64MB RAM / 128MB ROM
- USB 1.1 / RS-232
- Bar Code Scanner
- QWERTY or Numeric Keyboard
- Ruggedized: 5 foot drop to concrete
- WLAN Options: Wi-Fi 802.11a/b/g
- WWAN Options: eGPRS/GSM
- Voice over IP Ready (VoIP) available
