

InspectNTrack

Inspection Management Software

Inspection Management software that ensures you'll never miss another inspection.

No matter what type of inspection you do, InspectNTrack can make a difference in helping you track and manage your inspections.

InspectNTrack is a web-based inspection management solution designed to schedule, track, and document inspection and maintenance activities on any type of checkpoint. The system ensures on-time, accurate inspections and eliminates missed inspections, making it the perfect solution for inspections regulated by any authority having jurisdiction (AHJ) and non-regulated tasks.

Why Use InspectNTrack?

Regulatory agencies, insurance carriers and internal company procedures can require companies to perform mandatory inspections that ensure a safe and secure physical environment. InspectNTrack assists in providing:

- Compliance with regulatory mandates
- Fast field data entry
- Increased data integrity
- Greater accuracy and improved efficiency
- Mitigation of risk and liability
- Promotion of the lean processes
- Proactive management of inspections and findings
- Procedure Standardization
- Easy access to your data

InspectNTrack is designed to schedule and track any type of inspection including but not limited to:

EH&S/Life Safety	Facility	Simple Audits
Fire Alarms	HVAC/ Boilers	EH&S
Sprinklers	Property Condition	OSHA
Fire Extinguishers	Conveyer Systems	EPA
Safety Showers	Forklifts	Housekeeping
Eyewash Stations	PM Operations	Property Maintenance
Emergency Lights	Pest Management	Vehicles and Equipment
Exit Signs	Security Tours	Fences and Gates
Fire Doors	Manufacturing Equipment	

Easily Create, Maintain, and Update Records such as:

- Individual users
- Inspection checkpoints
- Assign tasks and task intervals
- Maintain checkpoint records
- Individual accounts for customers or departments
- Organize checkpoints into routes and zones within a route
- Multiple sites

Eliminate Paper Logsheets and Manual Data Entry by Using a Pocket PC

- Prompts the user via the Pocket PC with either pass/fail tasks or a question set comprised of one or several questions to answer
- Relates the questions to the checkpoint type being inspected
- Create Incidents via the Pocket PC to track abnormalities or informational findings found during routine inspections
- Manage a User's workload by selecting specific routes or zones the user will visit

Review, Analyze and Track Data with Reports

- History reports displaying the work that has been completed
- Missed inspections
- When the inspection was last performed
- Reports showing what the User visited and documented during the inspection tour, including any incidents triggered
- Discrepancy records which can be used to track whether or not a reported problem has been corrected
- Reports to show all open or closed discrepancies.

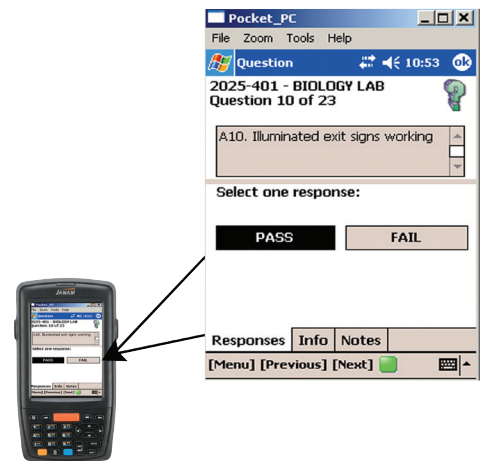

InspectNTrack is offered in 2 packages:

- InspectNTrack Standard
 - Single site with 3 checkpoint levels to choose from
- InspectNTrack Enterprise
 - Multi-site, Unlimited Checkpoints

What Do You Need To Use InspectNTrack?

- A computer with internet access. InspectNTrack supports: Internet Explorer, Firefox, Safari and Chrome browsers
- An optional handheld Pocket PC. TISCOR offers a variety of devices certified for use with InspectNTrack
- Optional barcode labels. Barcodes allow you to have audit ready records. The software tracks whether a checkpoint is scanned or manually visited, making the record an audit ready solution.
