

What Do You Need To Use InspectNTrack?

- A computer with internet access
 - InspectNTrack supports IE, Firefox, Safari and Chrome browsers
- An optional handheld Pocket PC
 - TISCOR offers a variety of devices certified for use with InspectNTrack
- Optional barcode labels
 - Barcodes allow you to have audit ready records. The software tracks whether a checkpoint is scanned or manually visited, making the record an audit ready solution.

Benefits of a Web-based Inspection System

Easy Implementation

Because InspectNTrack is accessed via the Internet; installation and setup of software at the customer's site are eliminated. Users can be up and running very quickly.

Little or No IT Infrastructure Required

Since the software is hosted by TISCOR and accessed through the web, an infrastructure at the user site not required. All that is needed is a computer with access to the internet. This means there's usually no need for on-site IT assistance. (*InspectNTrack requires an open TCP port to allow communication from the Pocket PC to the hosted server. Accessibility should be verified with IT prior to purchase.*)

Increased Accessibility and Productivity

InspectNTrack allows you to access your software from the internet, making it easily accessible from anywhere at any time. Information is immediately available across the globe.

Data Security and Connectivity

InspectNTrack is proactively monitored and protected with the newest technologies to ensure the security of your data, reducing the risk of loss. Because service level access is maintained at 98.5%, a user will seldom experience an inability to access their data.

Updates are Seamless

With web-based applications, updates are applied to one central location, allowing ALL users to benefit immediately from the update, without requiring the user to take any action, and without wasting the user's time downloading or installing updates.

Ownership of Data

Data remains the property of the User. If a User chooses not to renew a contract, the data is returned to the User on a CD at no additional charge.
